

Tying your module to your Addons account

Tying your module to your Addons account

In order to tie your module to your PrestaShop Addons account, you simply need to add your Addons key to the module's constructor:

```
public function __construct()
{
    $this->name = 'mymodule';
    $this->tab = 'front_office_features';
    $this->version = '1.0.0';
    $this->author = 'Firstname Lastname';
    $this->need_instance = 0;
    $this->ps_versions_compliancy = array('min' => '1.6', 'max' => _PS_VERSION_);
    $this->bootstrap = true;
    $this->module_key = '084fe8aecafea8b2f84cca493377eb9b';
}

(...)
```

The `module_key` can be found in your contributor account, in the module upload page.
