Updating PrestaShop

We have a dedicated guide for that: [Updating PrestaShop](#).

Uninstalling PrestaShop

PrestaShop is very easy to uninstall:

1. Delete all of PrestaShop's files and folders on your webserver, using your FTP client.
2. Delete all the `ps_` tables from PrestaShop's database, using phpMyAdmin.

 You will lose all information registered to your store: customers, orders, invoices, products, etc. This cannot be undone, unless you have proper backups of all your data.
