

# Chapter 3 - First steps - Access the Web service and list client

## First steps - Access the Web service and list client

### Preparation

1. Configure your PHP installation so that it has the CURL extension installed and activated:
  - With Windows: Place this line in your `php.ini` file

```
extension=php_curl.dll
```

- Linux/Mac: install the CURL extension

```
sudo apt-get install php5-curl
```

Copy the file provided by `PSWebServiceLibrary.php` to the root of your Web server. We will explain how to use this library in this tutorial.

You can do this tutorial on a local drive even while your store is on the internet.

2. Create a file `list_the_clients.php` at the root of the web server that you have chosen.
3. Specify where to find the web server in your file:

```
require_once( './ PSWebServiceLibrary.php' );
```

Configured this way, your file should be found in the same folder as `PSWebServiceLibrary.php`.
