

Customer addresses

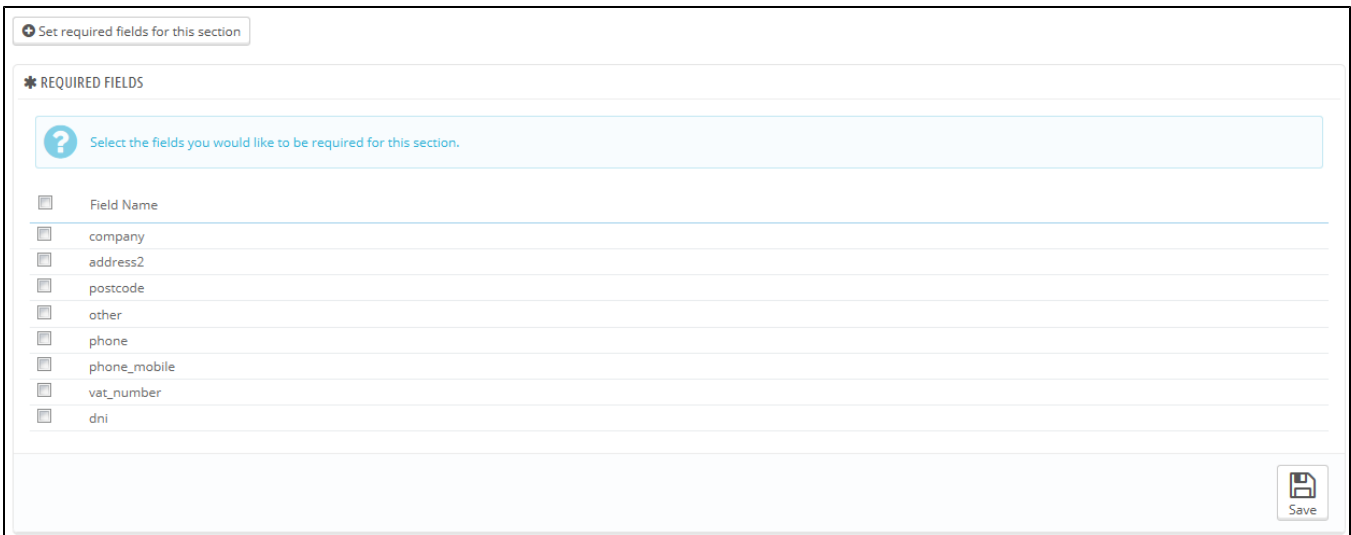

Customer addresses

By clicking on the "Addresses" page, you will have access to the list of your customer's addresses (home, work, etc.). You can edit them using the "Edit" button, or delete them altogether.

ID	First Name	Last Name	Address	Zip/Postal Code	City	Country	
1	John	DOE	16, Main street	75002	Paris	France	Edit
3	John	DOE	16, Main street	33133	Miami	United States	Edit

Below the addresses table is the "Set required fields for this section" button. It opens a form where you can indicate if a database field is necessary or not by checking the appropriate boxes: this way, you can make it so fields such as "company" or "phone number" are mandatory when a customer is registering a new address on your shop.

Some fields, however, require special care:

- **Customer email.** This field is essential: if you are adding an address for an existing customer, you MUST identify this customer using her/his email address. Otherwise, PrestaShop will not know who to assign this address to.
- **Identification number.** The national ID card number of this person, or a unique tax identification number. This field is of course optional. Note: the field's title gives a singular hint: "DNI / NIF / NIE". Those are Spanish acronyms: DNI stands for "Documento Nacional de Identidad", NIF stands for "Número de Identificación Fiscal" and NIE stands for "Número de Identidad/Identificación de Extranjero".
- **Address alias.** A short description, in order to help the customer choose the correct address: "Home", "Office", "Aunt Beth's", etc.
- **Company.** The name of the customer's company, if needed.
- **VAT number.** The VAT identification number for the customer (or the customer's company).
- **Other.** Some additional information that might be useful to the shipment.
