

JavaScript Coding Standards

JavaScript Coding Standards

Introduction

For our JavaScript code, we chose to follow the well-detailed and documented [Airbnb JavaScript Style Guide](#). Code should be written in ECMAScript 6 and Babel will transpile it into ECMAScript 5 for a wider browser compatibility.

Some noteworthy rules:

- Always use semicolons at the end of an instruction.
- Use soft tabulations with two spaces to indent.
- Use braces with all multi-line blocks.

```
(function () {  
  if (test) {  
    return false;  
  }  
})();
```

Do not hesitate to look at their [complete documentation](#).
